IN THE CLAIM

Please amend the claims as follows:

- 1. (original) Information carrier comprising a disc (1; 111) provided with positioning means (3; 103) which are arranged to cooperate with a disc drive turntable (4; 104) for positioning the disc (1; 111) on the turntable (4; 104) and which are at least movable relative to the disc (1; 111) in a transversal disc direction (T).
- 2. (original) Information carrier according to claim 1, wherein said positioning means (3; 103) are at least movable between a first position wherein the positioning means are substantially located within the information carrier and a second position wherein the positioning means project at least partially from a side of the information carrier.
- 3. (original) Information carrier according to claim 2, wherein the information carrier comprises means (6; 106) for moving said positioning means (3; 103) towards said first position.
- 4. (currently amended) Information carrier according to any one of the preceding claims 1, wherein said movable positioning

means (3; 103) extend at least partially into an aperture (5; 105) of said disc (1).

- 5. (currently amended) Information carrier according to any one of the preceding claims 1, wherein said positioning means comprise a movable positioning element (3; 103).
- 6. (original) Information carrier according to claim 5, wherein said positioning element (3) is a spherical element (3), for example a ball.
- 7. (currently amended) Information carrier according to any one of the preceding claims of a central part (1a) of said disc (1) comprises said positioning means (3).
- 8. (currently amended) Information carrier according to any one of the preceding claims 1, wherein said positioning means (3) are arranged to be moved by a magnetic field.
- 9. (currently amended) Information carrier according to any one of the preceding claims claim 1, wherein the information carrier comprises a cassette (101) containing said disc (111).

- 10. (original) Information carrier according to claim 9, wherein said cassette (101) is arranged for moving the positioning means (103) in said transversal disc direction (T).
- 11. (original) Information carrier according to claim 10, wherein said cassette (101) comprises a movable cassette part (106) which is connected to said positioning means (103) for the movement thereof.
- 12. (currently amended) Turntable suitable for cooperation with the positioning means (3; 103) of an information carrier according to any one of claims 1-11 claim 1.
- 13. (original) Turntable according to claim 12, comprising a positioning aperture (7; 107) for receiving at least part of said positioning means (3; 103) of the information carrier for positioning said disc (1; 111).
- 14. (original) Turntable comprising a shaft (203) for positioning a disc (201) of an information carrier by means of a respective disc aperture (202), which disc positioning shaft (203) is substantially movable in a transversal direction with respect to a disc supporting surface (209) of the turntable (204).

- 15. (original) Turntable according to claim 14, wherein said shaft (203) has a diameter of about 5 mm or less, particularly about 1 mm or less.
- 16. (currently amended) Device for reading information from and/or writing information onto an information carrier, comprising at least one turntable according to any one of claims 12-15claim 12.
